ABSTRACT

The study described the patterns of government outlay to U.S. metropolitan and non-metropolitan areas for 86% of the $499 billion of federal outlays and loan guarantees made in fiscal 1978 to individual counties in the 50 states. Between metropolitan and non-metropolitan areas there were considerable variations in outlays to programs in seven functional areas. Non-metropolitan areas received $195 more per capita for agriculture, energy, and the environment; $42 more for targeted economic development; and $20 more for tansfer payments. Metropolitan areas received $300 more per capita for defense and space programs; $90 more for human resources; $29 more for physical investments; and $66 more for other federal functions. Overall, metropolitan areas received an average of $2,007 per capita, 9% more than the $1,845 per capita for non-metropolitan areas. The 20% of the U.S. population living in counties with the lowest outlays received only 11% of federal funds while the 20% living in counties with the highest outlays received 37%. Within metropolitan areas, core counties often received higher per capita outlays than did fringe counties. Within non-metropolitan areas, very rural counties received substantially higher outlays than other counties. Southern and Western non-metropolitan areas received more outlays for most functions but Northeastern non-metropolitan areas received less per capita than metropolitan and non-metropolitan areas in other regions. FEDERAL OUTLAYS IN FISCAL 1978: A COMPARISON OF METROPOLITAN AND NONMETROPOLITAN AREAS. By Charles I. Hendler and J. Norman Reid. Economic Development Division; Economics, Statistics, and Cooperatives Service; U.S. Department of Agriculture. Rural Development Research Report No. 25.

ABSTRACT

Residents of U.S. metropolitan areas received an average of $2,007 per capita of Federal outlays and loan guarantees, or 9 percent more than the $1,845 per capita in nonmetropolitan areas, during fiscal 1978. Outlays vary considerably between metropolitan and nonmetropolitan counties. Nonmetropolitan areas received $195 more per capita for agriculture, energy, and the environment, for example, while metropolitan areas received almost $300 more per capita for defense programs. This study estimates or traces 86 percent of the $499 billion of Federal outlays and loan guarantees made in 1978 to individual counties.

Keywords. Federal outlays, Federal spending, Federal aid, Federal programs, expenditure analysis, public policy, program analysis, rural development, urban policy.

SUMMARY

Residents of metropolitan areas received an average of $2,007 per capita of Federal outlays and loan guarantees, or 9 percent more than the $1,845 per capita in nonmetropolitan areas, during fiscal 1978. This study estimates or traces 86 percent of the $499 billion of Federal outlays and loan guarantees to individual counties.

Nonmetropolitan areas received $195 more per capita for agriculture, energy, and the environment, $42 more for targeted economic development, and $20 more for transfer payments. Metropolitan areas received almost $300 more per capita for defense programs, $90 more for human resources, $29 more for physical investments, and $66 more for other Federal functions.

Core counties of the largest metropolitan areas often received much higher per capita outlays than counties at the fringe of these large metropolitan areas. Very rural nonmetropolitan counties received substantially higher outlays for agriculture, targeted development, and physical investment projects than other nonmetropolitan counties. Yet the Federal government spent much less per capita for defense in these rural counties than in more urbanized nonmetropolitan counties. Nonmetropolitan areas in the West and South received more outlays per capita for most functions; nonmetropolitan areas in the Northeast received less per capita than metropolitan and nonmetropolitan areas in other regions.

Some areas received much higher levels of Federal funding than others. Overall, the 20 percent of the U.S. population that lived in counties with the lowest per capita outlays received only 11 percent of Federal funds. The 20 percent that lived in counties with the highest per capita outlays received 37 percent of Federal spending. This same pattern of concentration was found among metropolitan and nonmetropolitan counties.

Federal Outlays in 1978:

A Comparison of Metropolitan and Nonmetropolitan Areas

*Charles I. Hendler and J. Norman Reid**

INTRODUCTION

The Federal Government spent and guaranteed loans in the 50 States worth over $499 billion during fiscal 1978. Most agencies were able to trace or estimate the distribution of their outlays to individual counties. 1/ This report describes patterns of government outlays in metropolitan and nonmetropolitan areas, using a 10-division geographic profile that identifies counties from core urban metropolitan to those that are totally rural. 2/

This report outlines regional patterns and the degree of concentration of outlays among counties within metropolitan and nonmetropolitan areas. Programs are grouped into 30 functional categories for ease of comparison. This report also describes the distribution of Federal Government activities among counties and may be useful to researchers and policymakers in identifying inequities among similar programs for further examination and analysis.

LIMITATIONS TO INTERPRETING OUTLAYS DATA

Metropolitan areas received $224 (9 percent) more per capita than counties outside of metropolitan areas in fiscal 1978. However, one cannot conclude from these facts alone that persons living in nonmetropolitan counties have been treated unfairly. Spending data do not distinguish programs by the extent of geographic area that actually receives benefits and services, the strength of income and employment effects, and the value of loans and loan guarantees versus direct spending. One must also compare local conditions and needs and make some accounting for other Federal activities that

---

*Economist and social science analyst, respectively.

1/ Federal outlays data are compiled by the Community Services Administration and published annually as Geographic Distribution of Federal Funds. In this report, the term outlays includes loan guarantees.

2/ The county classification system is explained in Fred K. Hines, David L. Brown, and John M. Zimmer, Social and Economic Characteristics of the Population in Metro and Nonmetro Counties, 1970, AER-272, Economic Research Service, U.S. Department of Agriculture, March 1975. Metropolitan counties are within Standard Metropolitan Statistical Areas (SMSAs). Core and fringe counties are parts of SMSAs with 250,000 to 999,999 population. Lesser counties are part of SMSAs of 50,000 to 249,999 population. Nonmetropolitan counties are not within SMSAs. An adjacent county is one contiguous to an SMSA, except where less than 1 percent of the labor force commutes to the SMSA. Urbanized counties have 20,000 or more urban residents (persons living in a place of 2,500 or more population). Less urbanized counties have between 2,500 and 20,000 urban residents. Totally rural counties have no communities with 2,500 population.

affect local economies and the quality of life, such as tax expenditures and regulatory practices.

Areas Served

While some Federal programs support services in the communities that receive them, such as housing or health clinics, others such as water projects might benefit a number of counties even though the outlays are spent in only one or two counties. Another class of programs such as defense might produce services for the benefit of the entire Nation. Federal outlays data simply do not reveal how wide an area a program has served; they merely show to which county the dollars were given or loaned.

Income and Employment Effects

Federal outlays data do not measure the rise in income which results from Federal spending in local areas. Some programs may stimulate economic activity in the county that initially receives Federal funds, raising incomes and employment, while other types of programs stimulate activity elsewhere. For instance, a grant might be used by a community to buy a piece of equipment manufactured hundreds of miles away. The community income or wealth is raised only by the value of that manufactured good. Another program may require hiring additional employees in the county where the outlay was spent. In this case, the community not only receives the value of the employees' services, but part of those employees' wages will be spent on activities that require other local labor--building homes, repairing cars, buying groceries. Thus, the community's income would be expected to rise by more than the value of the initial outlay. The desirability of programs in terms of their income and employment benefits may vary considerably. Eliminating certain types of outlays to some communities may cause much more distress than curtailing of an equal dollar amount of other programs.

Loans and Grants

Federal outlays data treat the face value of loans and loan guarantees as equal in value to the amounts of Federal spending for grants, transfer payments, salaries, and purchases. This is not necessarily the case. Loans and loan guarantees may have less value to local communities since they must eventually be repaid.

The outlays data mask further differences in the value of loans and loan guarantees since they treat each loan alike, regardless of differences in repayment period or amount of interest subsidy. To compute the true value of a loan, information is needed on the repayment period, the rate of interest, and the rate of interest that would have been charged had the loan been made in a free market. This information is not readily available. The figures reported here represent the face value of loans and guaranteed loans.

The result is that while various areas may receive equal amounts of assistance, their value may not be equivalent. This would be true in the case of three counties each receiving $10 million in aid, where in one case the aid was in grants, the second loans to be repaid in 1 year, and the third loans due in 40 years. Another case is illustrated by two counties each receiving $10 million in Federal housing loans with 30-year maturities, one carrying a 10-percent interest rate, and the other a rate of only 5 percent.

This problem is important when making metropolitan-nonmetropolitan comparisons since nonmetropolitan areas received twice as much of their Federal funds in the form

of loans and loan guarantees (fig. 1). Regional differences in the proportion of Federal outlays made up of loans and loan guarantees are also important. 3/

EXCLUDED PROGRAMS

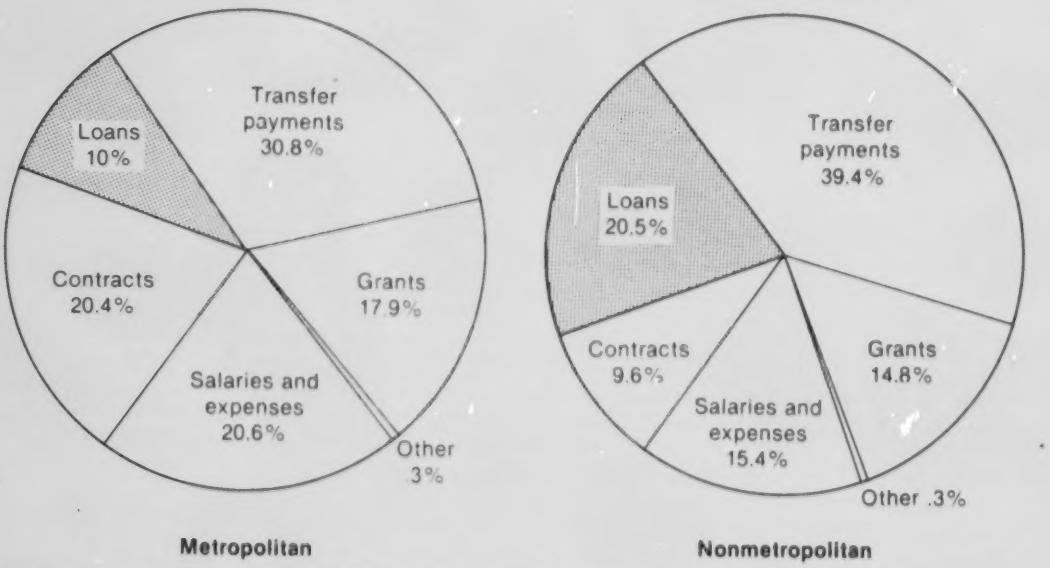
Fourteen percent of the $499 billion of Federal expenditures and loan guarantees were not included in this report because they were reported in ways that do not reflect actual distribution of funds. However, estimation techniques were judged acceptable for sixty-one percent of all outlays.

Seventy-five percent of all excluded outlays were reported as going to counties using estimation techniques which did not reflect differences in the distribution of activity between metropolitan and nonmetropolitan areas. The largest of these excluded outlays was interest on the public debt ($22 billion), which was reported on a per capita basis for the Nation. As a result every county appeared to receive the same level of per capita outlays for this activity.

Twenty-five percent of excluded outlays did not reflect the actual distribution of funds to local areas. Half of these excluded outlays were reported as going to State capitals although these funds were dispersed to other areas of the States as well. Revenue-sharing payments to State governments ($2.3 billion) and social services for low income and public assistance recipients ($2.8 billion) were the two largest programs excluded. There were also dozens of smaller formula grant programs which were excluded for the same reasons. The remainder of excluded programs were reported to other intermediaries. Payments to the Federal Employees' Health Benefits Fund, for example, will surely serve people in more than the 45 counties as reported.

Figure 1

Federal Outlays, Metropolitan and Nonmetropolitan Areas, Fiscal 1978



3/ J. Norman Reid and William F. Fox, "Interregional Benefits from Federal Spending: A New Look at an Old Issue," Policy Studies Journal (forthcoming in 1980).

Among other major programs excluded were many food distribution programs, particularly school lunches ($8.5 billion), military contracts less than $10,000 ($5.4 billion), the Land and Water Conservation Fund used to build recreation areas ($3.9 billion), and most Commodity Credit Corporation financing ($2.3 billion).

FUNCTION CATEGORIES

Each of the over 1,600 Federal programs has been classified into one of 30 detailed function categories. These categories in turn have been aggregated into seven broad function categories (table 1) (fig. 2). Most of these categories are distinct; an exception is the set of programs dealing with environmental protection and natural resources activities, which have been divided into two categories. Natural resources programs included in the broad physical investment function consist mainly of programs making heavy capital investments, usually for exploiting a particular resource such as dams. On the other hand, environmental protection and management programs included in the broad agriculture, energy, and environment function deal primarily with research, regulation, and planning. The major programs making up each function are indicated in the appendix tables.

PATTERNS OF SPENDING

The Federal Government in fiscal 1978 spent the greatest amount for transfer payments ($167.9 billion), followed by defense and space ($92.6 billion), physical investments ($65.7 billion), human resources ($34.4 billion), other programs ($35.1 billion), agriculture, energy, the environment ($26.5 billion) and targeted development ($12.0 billion). Nonmetropolitan areas received substantially more dollars per capita than metropolitan areas in three of the seven function categories (tables 2 and 3). Nonmetropolitan areas received $195 more per capita for agriculture, energy, and the environment, $42 more for targeted development, and $20 more for transfer payments. Metropolitan areas received almost $300 more per capita in defense and space, $90 more for human resources, $29 more for physical investments, and $56 more per capita for other functions.

Concentration of Outlays

Simple comparisons of per capita averages tell only part of the story about patterns of Federal spending. Levels of outlays received by individual counties often vary widely within any of the metropolitan or nonmetropolitan categories. In fiscal 1978, the 20 percent of the population in counties receiving the lowest levels of outlays got only 11 percent of the total, while the 20 percent of the population in counties with the highest outlays received 37 percent, or nearly 3-1/2 times as much (fig. 3). This is true for each group of counties along the urban-rural spectrum.

Variation in levels of outlays differs among the individual functions and between metropolitan and nonmetropolitan areas. These differences can be compared using the statistic "coefficient of variation," which measures the degree of similarity in the levels of per capita outlays received by individual counties (table 4). Lower figures indicate greater relative similarity in the level of per capita outlays received by individual counties.

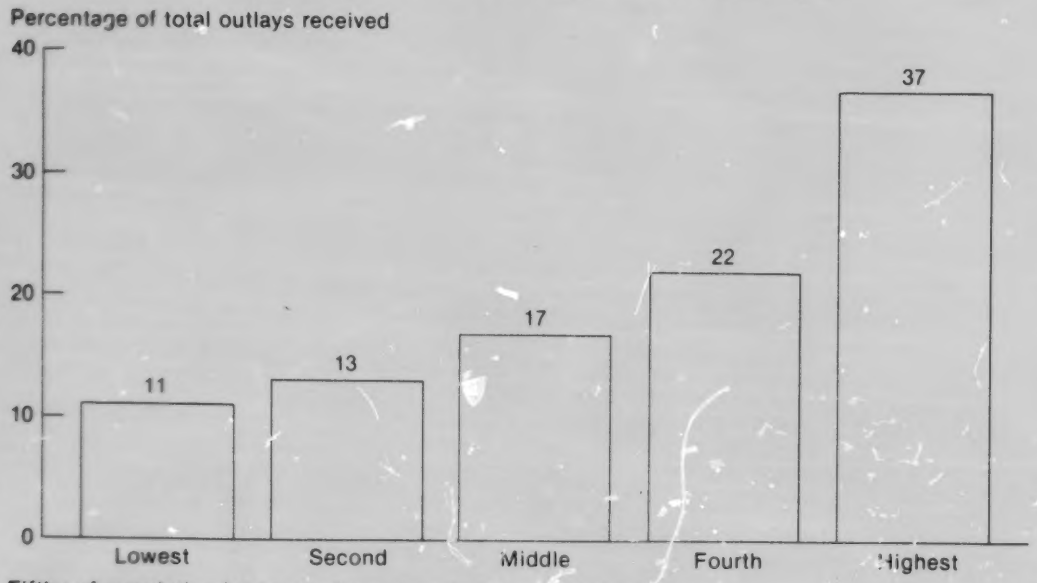
1/ Coefficient of variation is equal to the standard deviation divided by the mean expressed as a percentage. The higher the coefficient of variation, the more per capita spending differs among counties.

Figure 3

Shares of Outlays Received by Shares of Population, Fiscal 1978



In general, outlays for agriculture, energy, and environmental programs and for the "other programs" category are the most unevenly distributed among the Nation's counties. Conversely, transfer payments are the most nearly equally distributed. Overall, outlays are somewhat less evenly distributed among nonmetropolitan areas than among metropolitan counties, though the difference is not great. For individual functions, however, the distribution of outlays is often much less evenly distributed among nonmetropolitan counties, as spending for aeronautics and space illustrates (table 4). The coefficient of variation for all outlays is lower than those for most individual functions, which suggests that while variations in the distribution of funds under any group of programs may vary widely, things tend to even out overall.

Although per capita outlays nationally amounted to $2,006, half of the U.S. population lived in areas that received less than $1,683, just over 83 percent of the national average (table 5). On the one hand, 10 percent of the population lived in areas with per capita outlays almost 50 percent less than the national average. Yet another 10 percent lived in counties which received 85 percent or more of that level, and 1 percent of the population lived in counties that received nearly four times as much. One county, in fact, had outlays of over $34,000 per capita, almost 17 times the national average.

Patterns by Function

Concentrations of outlays are quite similar in metropolitan and nonmetropolitan areas, though larger proportions of the nonmetropolitan population reside in counties with less per capita outlays. Variations in the distribution of outlays for individual functions are often more substantial.

Table 5--Per capita Federal outlays in counties where selected percentages of metropolitan and nonmetropolitan populations lived, fiscal 1978

Function	Percentage of population--								Maximum county
	Receiving less than dollar amount shown			Median	Receiving more than dollar amount shown				
	5	10	25		25	10	5	1	
	Dollars per capita								
United States	968.7	1,086.2	1,340.3	1,682.7	2,301.1	3,037.8	3,810.8	7,294.6	34,307.5
Metropolitan	968.7	1,086.2	1,379.7	1,746.0	2,375.1	3,108.8	3,935.2	8,318.0	18,12[illegible].9
Nonmetropolitan	983.0	1,085.0	1,277.7	1,536.4	1,963.5	2,676.1	3,531.6	6,539.7	34,307.5

Agriculture, Energy, and the Environment

Programs for agriculture, energy, and the environment, 6 percent of the outlays covered in this report, brought many more dollars per capita to nonmetropolitan areas than to metropolitan areas, $263 and $68, respectively (fig. 4) (table 6). Agricultural assistance to farmers was much higher per capita in the most rural areas ($549), while core metropolitan areas received only $17 per capita for agricultural assistance. The average for all nonmetropolitan areas was $201 per capita. However, over 75 percent of persons in rural areas resided in counties that received under $200 per capita for agricultural assistance, while 10 percent received $472 or more; 5 percent received at least $865 and 1 percent received over $2,269 per capita (table 6). Agricultural research and services brought small amounts of money to both metropolitan ($7 per capita) and nonmetropolitan areas ($9 per capita).

Environmental protection and management programs sent $14 per capita to metropolitan areas and $20 per capita to nonmetropolitan areas. The distribution of outlays for 81 percent of the environmental programs had to be estimated. Environmental protection and management programs included funds for Forest Service, Interior, National Oceanic and Atmospheric Administration (NOAA), and the Environmental Protection Agency (excluding funds for the construction of waste treatment facilities).

The distribution of 95 percent of the programs in mines and energy was estimated with $31 per capita going to metropolitan areas, and $33 to nonmetropolitan areas. Department of Energy programs favored nonmetropolitan areas; Interior programs favored metropolitan areas. Urbanized areas not adjacent to SMSAs received the most outlays for mines and energy ($76 per capita), followed by fringe metropolitan areas with $56 per capita.

Defense and Space

Federal outlays for defense and space programs, 21 percent of all outlays, sent twice as much money per capita to metropolitan areas as to nonmetropolitan areas ($428 and $214, respectively) (fig. 5) (table 7.) The estimated distribution of 96 percent of these outlays, however, was based on the location of the prime contractor. Through subcontracting, distribution of these funds may have been less concentrated. Spending for aeronautics and space programs brought insignificant amounts of money to nonmetropolitan areas. Metropolitan areas received $25 per person; their core areas received almost $43 per person. Defense contracts brought $224 more per capita to metropolitan areas than to nonmetropolitan areas ($320 and $96 respectively). All urban-rural profile groups of nonmetropolitan areas received at least $50 per person for defense contracts; three groups registered over $100 per person. On the other hand, half of the nonmetropolitan population lived in counties that received less than $7 per capita in contracts. Only 10 percent lived where contracts brought over $145 per person, and just 5 percent of nonmetropolitan persons resided in counties that had defense contract expenditures as high as the metropolitan average, $320 (table 7).

Funds for defense payrolls and administration were spent so that metropolitan counties received $165 per capita, and nonmetropolitan counties received $116 per capita. However, nonmetropolitan counties that were urbanized and not adjacent to an SMSA had the highest outlays for defense payrolls and administration, $323 per capita, over three times that of core metropolitan counties. Nonmetropolitan defense payroll and administration expenditures were concentrated in only a few counties. Only 10 percent of nonmetropolitan persons lived in counties which received $145 or more per capita. In metropolitan areas, 10 percent of the population lived where expenditures

Defense payrolls and administration	0	0	2.8	8.7	22.6	119.1	652.3	2,378.6	7,124.2

for defense payrolls and administration were greater than $467 per capita. In comparison, 1 percent of the U.S. population lived where expenditures for all defense and space programs were over $3,870 per person.

Human Resources

Spending for human resources, 9 percent of outlays, was much higher in metropolitan areas than nonmetropolitan areas ($184 and $94 per capita, respectively) (fig. 6) (table 8). The more rural an area, the lower the outlays received per capita. The only detailed function in human resources that favored nonmetropolitan areas was elementary, secondary, and adult education ($18 average for metropolitan areas and $22 for nonmetropolitan areas). The most rural areas received $33 per capita.

Funds for employment training and vocational education were concentrated in metropolitan areas--$45 per capita overall, and $57 per capita in the core counties. Only urbanized counties adjacent to SMSAs received funds at levels somewhat comparable to levels in metropolitan areas ($31 per capita). Other nonmetropolitan profile categories received between $4 and $17 per capita. Ninety percent of this function's outlays were estimated based on the distribution of prime sponsors.

Spending to support health services was twice as high in metropolitan areas as nonmetropolitan areas ($39 and $19 per capita, respectively). Spending to support handicapped services brought $7 to metropolitan areas and $3 to nonmetropolitan areas. Spending for social services followed the same pattern--$6 per capita in metropolitan areas and just $2 in nonmetropolitan areas. However, this distribution includes only one-fourth of outlays for social services. In less urbanized and totally rural areas spending for social and handicapped services was nil. Programs supporting health research and training brought little money to rural areas ($3 per capita), but $27 per capita to metropolitan areas. Funding for arts, humanities, and museums was only noticeable in core metropolitan areas. Support for higher education and research was $40 in metropolitan areas and $30 in nonmetropolitan areas. Even the most rural areas received an average of $20 per capita for higher education and research programs.

Physical Investment

Fifteen percent of Federal funds were spent for physical investments, slightly favoring metropolitan areas--$311 per capita compared with $282 per capita in nonmetropolitan areas (fig. 7) (table 9). Housing programs sent $172 per capita to metropolitan counties and $106 to nonmetropolitan counties. About $50 of this $66 difference can be accounted for by the distribution of veterans home loans. Excluding veterans programs, metropolitan areas received $88 per capita, and nonmetropolitan areas received $72 per capita. Nonmetropolitan areas adjacent to SMSAs received less per capita for housing than those not adjacent to SMSAs. Department of Housing and Urban Development loans favored metropolitan areas; Farmers Home Administration loans favored nonmetropolitan areas.

Transportation programs were $133 per capita in metropolitan areas, compared with $80 per capita in nonmetropolitan areas. Spending was highest in core metropolitan counties and also ran high in the most rural counties. Highway spending brought more dollars per capita to nonmetropolitan counties, while large programs in urban mass transportation and in the Federal Aeronautics Administration favored metropolitan counties.

Government agencies estimated the distribution of 45 percent of funds for natural resource development and for community facilities and utilities. Both of these functions brought more outlays per capita to nonmetropolitan counties than to metropolitan ones.

For natural resource development, metropolitan areas received $29 per capita, while nonmetropolitan areas received $49 per capita. The most rural areas received about $90 per capita. However, half the nonmetropolitan population lived where less than $8 per capita was spent for this function (table 9). Natural resource development includes watershed and forest projects, Army Corps of Engineers civilian projects, national parks, and reclamation projects of the Interior Department, as well as the Tennessee Valley Authority.

Spending for community facilities and utilities brought $23 per capita to metropolitan areas and $72 to nonmetropolitan areas. The most rural areas received about $120 per person. However, 75 percent of the nonmetropolitan population lived in counties where less than $72 per capita was spent. Major programs of this function include loans for waste treatment facilities and rural electric systems.

Targeted Development

Three percent of Federal funds, $12 billion, was allocated for targeted development programs. Small Business Administration and Farmers Home Administration programs made up almost all of these outlays. Nonmetropolitan areas received $86 per capita and metropolitan areas received $44 per capita (fig. 8) (table 10). Business and industrial development programs brought three times as much per capita to metropolitan areas as to nonmetropolitan areas, $20 versus $60. The more rural an area, the more dollars per capita it received, with the most rural areas receiving $88 per capita.

Community and regional development programs sent more dollars to metropolitan counties than nonmetropolitan counties ($22 and $13, respectively). The highest per capita expenditures were in the most rural and the most urban counties ($28 and $32, respectively). Community development block grants favored metropolitan areas on a per capita basis, though the discretionary portion of the program favored nonmetropolitan areas. Economic Development Administration programs favored nonmetropolitan areas, and Community Services Administration programs were about equally divided.

Native American programs provided relatively few dollars to metropolitan areas, but were important among the most rural counties, where they provided over $50 per capita.

Transfer Payments

Transfer payments, including social security, unemployment insurance, medical benefits, welfare, and food stamps, were just about evenly distributed between metropolitan and nonmetropolitan areas on a per capita basis ($770 and $790, respectively). However, distribution of 78 percent of these payments were merely estimated using a technique which would tend to obscure disparities. This is unfortunate since transfer payments represent 38 percent of all Federal outlays. In spite of this difficulty, medicare, welfare, and food stamp benefits were higher in core metropolitan and very rural areas, and unemployment benefits were slightly higher in metropolitan areas. Medicare and food stamp outlays were $317 per capita in core metropolitan counties and $267 per capita in the most rural counties. This compares to the lower national average of $237 per capita. Unemployment insurance paid $12 and $9 per capita in metropolitan and nonmetropolitan areas, respectively (fig. 9).

Although transfer payments seemed evenly distributed between metropolitan and nonmetropolitan areas, these payments were much more important in some counties than others. Over 25 percent of the U.S. population lived in counties where transfer payments were under $652 per capita, while another 25 percent lived in counties that received over $874 per capita, and 5 percent lived in counties that received at least

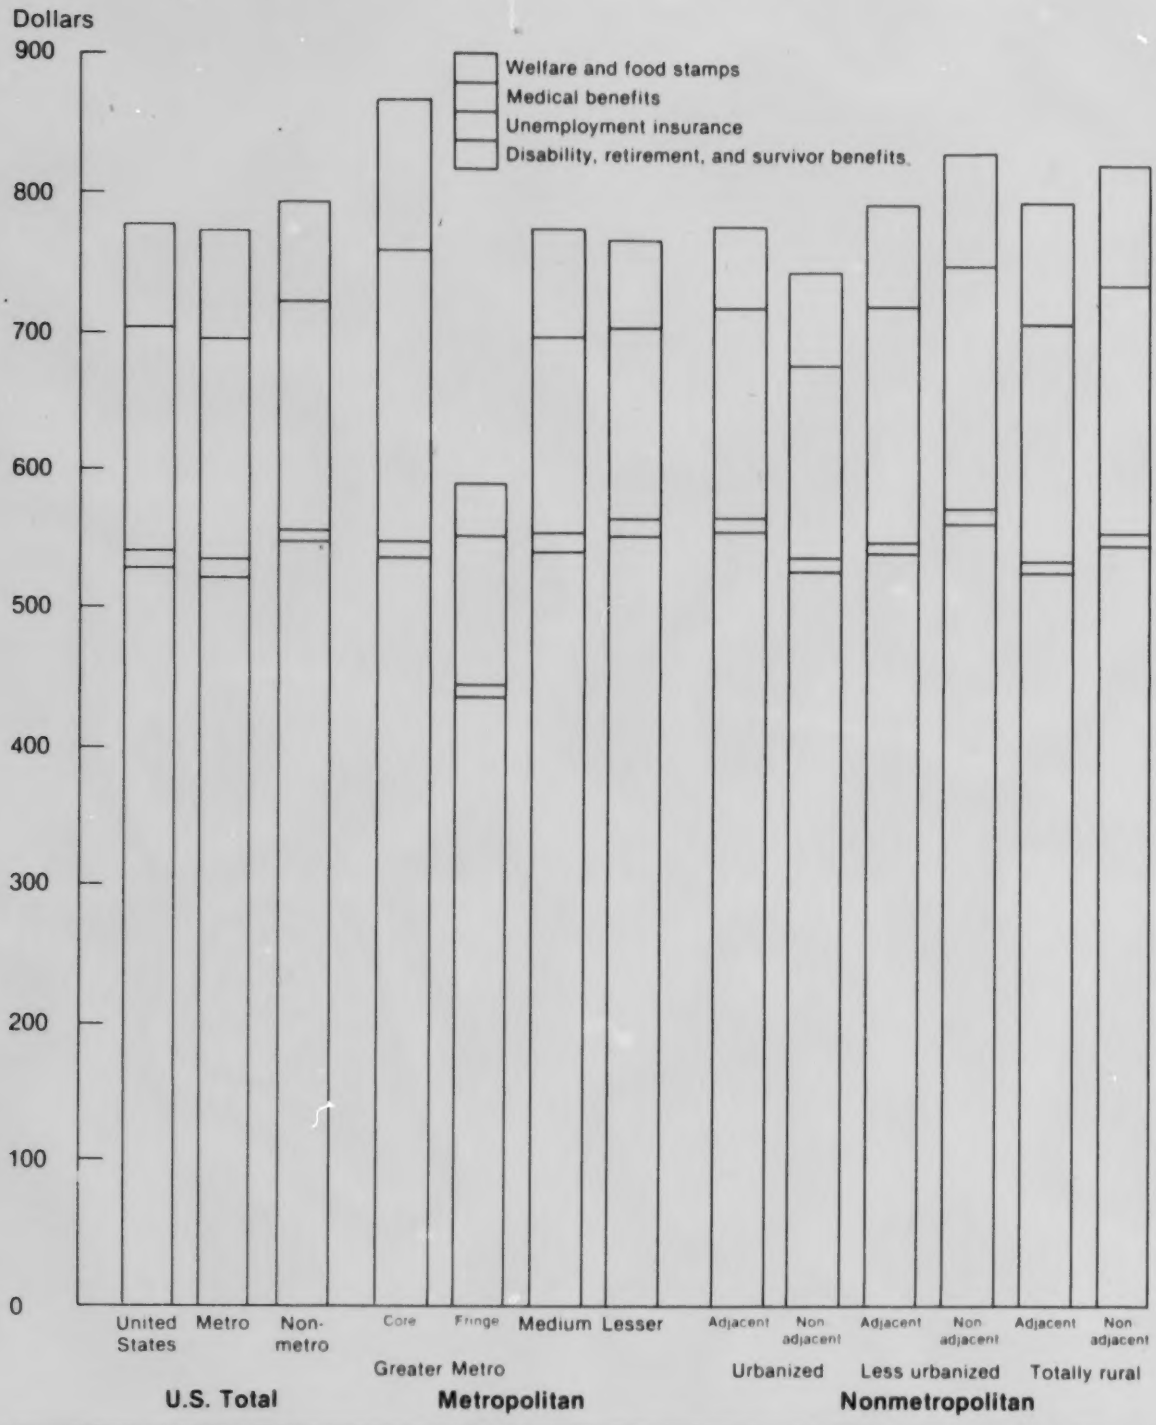
Figure 9

Per Capita Federal Outlays, Fiscal 1978
Transfer Payments Programs



$1,120 per person. This pattern was true in both metropolitan counties and nonmetropolitan counties (table 11).

Other Programs

The remaining 8 percent of Federal outlays analyzed was divided among three detailed functions--revenue sharing, general functions, and enforcement, prisons, and justice. Fifty-nine percent of the latter function's (enforcement, prisons, and justice) outlays distribution was estimated. Revenue sharing (local portion only) was divided almost evenly between metropolitan and nonmetropolitan areas on a per capita basis, $25 and $26 respectively (fig. 10). Core metropolitan counties and the most rural counties received a somewhat greater proportion of funds, $32 and $30 per capita, respectively. Fringe metropolitan counties received only $17 per capita. Though revenue sharing was distributed evenly between metropolitan and nonmetropolitan areas, these funds were much higher per capita in some counties than others. Over 25 percent of the U.S. population lived in counties where revenue sharing brought under $18 per capita, while another 25 percent lived in counties where over $29 per person was received, or 61 percent more. About 5 percent of the people lived in counties that received at least $42 per capita. Patterns of concentration were much the same for both metropolitan and nonmetropolitan areas as for the Nation (table 12).

Funds for general functions, primarily governmental administrative activities, were spent so that metropolitan counties received $316 per capita and nonmetropolitan areas received $61 per capita. Core metropolitan counties received an average of $210 per capita. However, the typical metropolitan county received only $90 per person. General function figures were based on estimates for 65 percent of the outlays.

Enforcement, prisons, and justice was the most unequally distributed function. Though nonmetropolitan areas averaged $29 per capita, $10 more than metropolitan areas, the typical nonmetropolitan county received just $2 per capita. An outlay of $1.4 billion was sent to the county where the Federal Law Enforcement Training Center is located; thus per capita spending for this function in urbanized areas not adjacent to an SMSA was startlingly high, and the average for nonmetropolitan counties was unrepresentative of the typical situation. Core metropolitan areas received $33 per capita.

Regional Patterns

Metropolitan areas in the South and West and nonmetropolitan areas in the West received per capita outlays well above the U.S. average (fig. 11) (table 13). Metropolitan areas in the West received 30 percent more outlays per person than metropolitan areas in the Northeast, 49 percent more outlays than metropolitan areas in the North Central region, but only 3 percent more than metropolitan areas in the South. Nonmetropolitan areas in the West received 52 percent more outlays per capita than nonmetropolitan areas in the Northeast, 30 percent more outlays than nonmetropolitan areas in the North Central States, and 27 percent more outlays than nonmetropolitan areas in the South.

For programs in agriculture, energy, and the environment, substantially more dollars per capita were sent to nonmetropolitan areas in the North Central region and the West than other areas, especially to the Northeast. Defense and space expenditures were concentrated in the the West, where metropolitan areas and nonmetropolitan areas received much more than like areas of other regions. Physical investment projects brought extremely large outlays to the nonmetropolitan West. However, both metropolitan and nonmetropolitan areas in the North Central States received high levels of outlays for community facilities and utilities. The Northeast received relatively little.

In transportation, the nonmetropolitan areas of the West received twice the nonmetropolitan average. Metropolitan areas in the South also received proportionately more for transportation programs. Because the West was the only region to receive significant funds for Native Americans, nonmetropolitan areas in the West received 2-1/2 times the U.S. average for targeted development. Transfer payments were fairly evenly distributed, with the Northeast receiving slightly more per capita. Revenue sharing favored western metropolitan areas. General functions favored the South and West, and the South received the most outlays per capita for enforcement, prisons, and justice (fig. 11 and table 13).

Economics, Statistics, and Cooperatives Service

The Economics, Statistics, and Cooperatives Service (ESCS) collects data and carries out research projects related to food and nutrition, cooperatives, natural resources, and rural development. The Economics unit of ESCS researches and analyzes production and marketing of major commodities; foreign agriculture and trade; economic use, conservation, and development of natural resources; rural population, employment, and housing trends, and economic adjustment problems; and performance of the agricultural industry. The ESCS Statistics unit collects data on crops, livestock, prices, and labor, and publishes official USDA State and national estimates through the Crop Reporting Board. The ESCS Cooperatives unit provides research and technical and educational assistance to help farmer cooperatives operate efficiently. Through its information program, ESCS provides objective and timely economic and statistical information for farmers, government policymakers, consumers, agribusiness firms, cooperatives, rural residents, and other interested citizens.
